OFFLINE-FIRST SECURITY ENGINEERING

Offline-First Directive

VNAGY Policy Structure — Minimal, Deterministic, Explicit

Document ID: VNAGY-OFD-001

Version: v1.1

Revision History:

Version	Date	Author	Description
V1.0	07 August 2026	V. Nađ	Draft
V1.1	08 August 2026	V. Nađ	Draft Revision

Document Status: Internal Technical Specification

Prepared by: VNAGY Security Engineering

Reviewed by: V. Nađ — Internal Peer Review

Table of Contents

1. Policy Identifier

VNAGY-OFD-001 — AI Isolation Policy

2. Directive Statement

This directive defines mandatory offline-first operational constraints for all VNAGY components.

3. Mandatory Rules

- Components **MUST** operate correctly without network access.
- All logic **MUST** remain fully deterministic under offline conditions.
- State transitions **MUST NOT** depend on remote systems.
- Local symbolic scoring **MUST** remain valid without external resources.
- Configuration **MUST** remain static and locally resolvable.

4. Prohibited Actions

- Components **MUST NOT** initiate or expect remote communication.
- Modules **MUST NOT** rely on cloud services, APIs, or remote storage.
- No component **MUST NOT** degrade functionality when offline.
- Operational logic **MUST NOT** include dynamic network-dependent behavior.
- Components **MUST NOT** expose network-based thresholds or algorithms.

5. Allowed Actions

- Components **MAY** reference static local configuration files.
- Deterministic symbolic scoring **MAY** be performed locally.
- Modules **MAY** log offline-valid symbolic events.

6. Interaction Boundaries

- All interactions **SHALL** remain local and symbolic.
- No remote operational linkage is permitted.
- Offline-first behavior **SHALL** remain non-reconstructable and non-algorithmic.

7. Enforcement Notes

- Violations invalidate offline-first compliance.
- Non-compliant components **SHALL** be excluded from VNAGY integration.

8. Non-Operational Clause

This policy defines no operational logic, thresholds, algorithms, or reconstructable behavior.

9. Licensing Reference

Subject to **VNAGY-PSDL-1.3** licensing constraints.

10. Normative References

The following documents define the normative meaning of requirement keywords and provide the authoritative basis for **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY**:

- **RFC 2119 —** Key Words for Use in RFCs to Indicate Requirement Levels
- **RFC 8174 —** Clarification of Normative Language
- **ISO/IEC 27001 —** Information Security Management Systems
- **ISO/IEC 27002 —** Code of Practice for Information Security Controls
- **NIST SP 800-53 — S**ecurity and Privacy Controls for Information Systems
- **NIST SP 800-63 —** Digital Identity Guidelines
- **MITRE ATT&CK Framework —** Enterprise Matrix
- **Microsoft SDL —** Secure Development Lifecycle Guidelines
- **Kubernetes API Conventions —** SIG Architecture
- **Rust API Guidelines —** Official Rust Documentation
- **Python PEP 8 —** Style Guide for Python Code

11. Informative References

The following documents provide background context and supplementary guidance. They do not define mandatory requirements:

- **VNAGY Secure-First Conceptual Architecture Specification**
- **VNAGY Coding Standard Specification**
- **VNAGY Minimal License (PSDL-1.3)**
- **VNAGY CC BY-NC 4.0 Extended License**
- **OWASP Secure Coding Practices**
- **CAPEC — Common Attack Pattern Enumeration and Classification**
- **ISO/IEC 25010** — System and Software Quality Models

12. Normative Keyword Usage

This specification uses the normative keywords **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY** as defined in **RFC 2119** and clarified in **RFC 8174**. These keywords indicate requirement levels within this document.
