Killing Chain Format

VNAGY Policy Structure — Minimal, Deterministic, Explicit

Document ID: VNAGY-KCF-006

Version: v1.1

Revision History:

Version	Date	Author	Description
V1.0	07 August 2026	V. Nađ	Draft
V1.1	08 August 2026	V. Nađ	Draft Revision

Document Status: Internal Technical Specification

Prepared by: VNAGY Security Engineering

Table of Contents

1. Policy Identifier

VNAGY-KCF-006 — Killing Chain Format

2. Format Statement

This document defines the conceptual structure, symbolic representation rules, and deterministic constraints of the **VNAGY** Killing Chain Format (KCF). It does **not** define operational logic, detection algorithms, thresholds, or reconstructable incident workflows.

3. Mandatory Rules

- The format **MUST** represent events and states as symbolic, non-numeric, non-algorithmic tokens.
- All chain transitions **MUST** remain deterministic under identical symbolic input.
- Internal chain structure and ordering **MUST** remain non-exposed and non-derivable from outputs.
- All representations **MUST** remain offline-valid and locally resolvable.

4. Prohibited Actions

- The format **MUST NOT** define numeric severity, probability, or risk scores.
- The format **MUST NOT** encode detection logic, correlation rules, or operational playbooks.
- The format **MUST NOT** expose internal ordering logic, decision paths, or reconstructable workflows.
- The format **MUST NOT** perform aggregation, prediction, or pattern recognition.
- The format **MUST NOT** produce actionable or operational instructions.
- The format **MUST NOT** depend on external systems, dynamic data, or runtime variability.

5. Allowed Actions

- The format **MAY** define symbolic stages representing conceptual phases of an attack chain.
- The format **MAY** define deterministic symbolic transitions between stages.
- The format **MAY** represent non-operational, advisory, symbolic incident descriptors.

6. Interaction Boundaries

- All content **SHALL** remain symbolic, deterministic, and non-numeric.
- No reconstructable detection or response logic **SHALL** be present.
- No operational linkage to monitoring, response, or enforcement systems **SHALL** exist.
- Outputs **SHALL** remain advisory, non-actionable, and non-binding.

7. Enforcement Notes

- Any inclusion of operational logic, thresholds, or reconstructable workflows invalidates KCF compliance.
- Non-compliant formats **SHALL** be excluded from **VNAGY** integration.

.

8. Non-Operational Clause

This specification defines no detection algorithms, no response procedures, no numeric scoring, and no reconstructable incident handling logic. It is strictly conceptual and normative.

9. Licensing Reference

Subject to **VNAGY-PSDL-1.3** licensing constraints.

https://github.com/VNAGY-sec-ViktorijaN/VNAGY-Framework/blob/main/VNAGY/LICENSE/VNAGY%20Minimal%20License%20(PSDL%E2%80%911.3).pdf

10. Normative References

The following documents define the normative meaning of requirement keywords and provide the authoritative basis for **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY**:

- **RFC 2119 —** Key Words for Use in RFCs to Indicate Requirement Levels
- **RFC 8174 —** Clarification of Normative Language
- **ISO/IEC 27001 —** Information Security Management Systems
- **ISO/IEC 27002 —** Code of Practice for Information Security Controls
- **NIST SP 800-53 —** Security and Privacy Controls for Information Systems
- **NIST SP 800-63 —** Digital Identity Guidelines
- **MITRE ATT&CK Framework —** Enterprise Matrix
- **Microsoft SDL —** Secure Development Lifecycle Guidelines
- **Kubernetes API Conventions —** SIG Architecture
- **Rust API Guidelines —** Official Rust Documentation
- **Python PEP 8 —** Style Guide for Python Code

11. Informative References

The following documents provide background context and supplementary guidance. They do not define mandatory requirements:

- **VNAGY Secure-First Conceptual Architecture Specification**
- **VNAGY Coding Standard Specification**
- **VNAGY Minimal License (PSDL-1.3)**
- **VNAGY CC BY-NC 4.0 Extended License**
- **OWASP Secure Coding Practices**
- **CAPEC — Common Attack Pattern Enumeration and Classification**
- **ISO/IEC 25010** — System and Software Quality Models

12. Normative Keyword Usage

This specification uses the normative keywords **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY** as defined in **RFC 2119** and clarified in **RFC 8174**. These keywords indicate requirement levels within this document.
