AI Isolation Policy

VNAGY Policy Structure — Minimal, Deterministic, Explicit

Document ID: VNAGY-AIP-001

Version: v1.1

Revision History:

Version	Date	Author	Description
V1.0	07 August 2026	V. Nađ	Draft
V1.1	08 August 2026	V. Nađ	Draft Revision

Document Status: Internal Technical Specification

Prepared by: VNAGY Security Engineering

Reviewed by: V. Nađ — Internal Peer Review

VNAGY

1. Policy Identifier

VNAGY-AIP-001 — AI Isolation Policy

VNAGY

2. Directive Statement

This policy defines mandatory isolation rules for AI-adjacent components within the VNAGY framework.

VNAGY

3. Mandatory Rules

- Components **MUST** operate under strict isolation boundaries.
- AI-adjacent modules **MUST** maintain deterministic state transitions.
- Internal symbolic states **MUST** remain non-exposed.
- Local scoring **MUST** remain offline-valid.

VNAGY

4. Prohibited Actions

- Components **MUST NOT** access external networks.
- Modules **MUST NOT** share internal operational state.
- AI-adjacent logic **MUST NOT** initiate cross-module communication.
- No component **MUST NOT** expose thresholds, algorithms, or dynamic logic.

VNAGY

5. Allowed Actions

- Symbolic scoring **MAY** be performed locally.
- Deterministic transitions **MAY** be logged.
- Static configuration **MAY** be referenced.

VNAGY

6. Interaction Boundaries

- Modules MAY interact only through predefined symbolic channels.
- No direct operational linkage between AI-adjacent components is permitted.

VNAGY

7. Enforcement Notes

- Violations invalidate module compliance.
- Non-compliant modules SHALL be excluded from VNAGY integration.

VNAGY

8. Non-Operational Clause

This policy defines no operational logic, thresholds, algorithms, or reconstructable behavior.

VNAGY

9. Licensing Reference

Subject to **VNAGY-PSDL-1.3** licensing constraints.

10. Normative References

The following documents define the normative meaning of requirement keywords and provide the authoritative basis for **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY**:

- **RFC 2119** — Key Words for Use in RFCs to Indicate Requirement Levels
- **RFC 8174** — Clarification of Normative Language
- **ISO/IEC 27001** — Information Security Management Systems
- **ISO/IEC 27002** — Code of Practice for Information Security Controls
- **NIST SP 800-53** — Security and Privacy Controls for Information Systems
- **NIST SP 800-63** — Digital Identity Guidelines
- **MITRE ATT&CK Framework** — Enterprise Matrix
- **Microsoft SDL** — Secure Development Lifecycle Guidelines
- **Kubernetes API Conventions** — SIG Architecture
- **Rust API Guidelines** — Official Rust Documentation
- **Python PEP 8** — Style Guide for Python Code

11. Informative References

The following documents provide background context and supplementary guidance. They do not define mandatory requirements:

- **VNAGY Secure-First Conceptual Architecture Specification**
- **VNAGY Coding Standard Specification**
- **VNAGY Minimal License (PSDL-1.3)**
- **VNAGY CC BY-NC 4.0 Extended License**
- **OWASP Secure Coding Practices**
- **CAPEC — Common Attack Pattern Enumeration and Classification**
- **ISO/IEC 25010 — System and Software Quality Models**

12. Normative Keyword Usage

This specification uses the normative keywords **MUST**, **MUST NOT**, **SHOULD**, **SHOULD NOT**, and **MAY** as defined in **RFC 2119** and clarified in **RFC 8174**. These keywords indicate requirement levels within this document.
