1. Introduction

This document defines the symbolic, non-operational mathematical model of the VNAGY Secure-First Architecture. All expressions are conceptual, abstract, and intentionally non-computational. No symbol, construct, or notation in this specification can be used to derive, reconstruct, or implement any operational logic.

2. Symbolic Foundations

2.1. Conceptual Symbolism Only

All mathematical forms in this specification serve as symbolic representations of conceptual ideas. They do not encode values, parameters, thresholds, or functions.

2.2. No Executable Semantics

Symbols do not interact, compute, transform, or imply relationships. The model is non-operational by design.

2.3. Secure-First Constraint

All symbolic constructs comply with VNAGY's secure-first philosophy: no operational detail is ever disclosed.

3. Symbolic Layer Constructs

3.1. Signal Construct

$\langle \Sigma \rangle \rightarrow$ Conceptual representation of behavioral indicators

3.2. Baseline Construct

$\langle B \rangle \rightarrow$ Conceptual representation of expected behavioral patterns

3.3. Deviation Construct

$\langle \Delta \rangle \rightarrow$ Conceptual notion of difference between constructs

3.4. Scoring Construct

$\langle S \rangle \rightarrow$ Conceptual accumulation of deviation over time

3.5. Heuristic Construct

$\langle H \rangle \rightarrow$ Conceptual interpretation of behavioral tendencies

3.6. Correlation Construct

$\langle C \rangle \rightarrow$ Conceptual association between behavioral constructs

3.7. Risk Construct

⟨R⟩ → Conceptual synthesis of deviation, heuristics, and associations

4. Symbolic Interaction Rules

4.1. No Interaction

Symbols do not interact with one another.

4.2. No Transformation

Symbols do not transform or map into other symbols.

4.3. No Computation

Symbols do not imply any numerical or logical process.

4.4. No Algorithmic Meaning

No symbolic construct can be used to derive or approximate operational behavior.

5. Intellectual Property & Licensing

5.1. Ownership

VNAGY is the intellectual property of the author.

5.2. License

All symbolic constructs, diagrams, naming conventions, and conceptual structures are protected under:

5.3. Permitted Use

- Reading
- Sharing in original form
- Academic reference
- Citation with attribution

5.4. Prohibited Use

- Implementation
- Derivation
- Reconstruction
- Commercial use
- Removal or modification of license

5.5. Prohibited Use

© 2026 Viktorija Nad — All rights reserved.

6. Intellectual Property & Licensing

6.1. No Operational Details

No thresholds, weights, transitions, anti-evasion logic, or operational parameters are included.

6.2. Fully Safe for Public Release

The symbolic mathematical model is non-operational, non-computational, and non-reconstructable.
