1. Policy Identifier

VNAGY-MIP-002— AI Isolation Policy

VNAGY

2. Directive Statement

This policy defines mandatory interaction boundaries for modules within the VNAGY framework.

VNAGY

3. Mandatory Rules

- Modules **MUST** interact exclusively through predefined symbolic channels.
- Module state transitions **MUST** remain deterministic and isolated.
- Internal symbolic state **MUST** remain non-exposed to external modules.
- Module interfaces **MUST** remain static and non-dynamic.
- All interactions **MUST** remain offline-valid.

4. Prohibited Actions

- Modules **MUST NOT** access or modify another module's internal state.
- Modules **MUST NOT** initiate direct operational communication.
- No module **MUST NOT** expose thresholds, algorithms, or dynamic logic.
- Modules **MUST NOT** rely on network availability for interaction.
- Cross-module operational dependencies **MUST NOT** exist.

5. Allowed Actions

- Modules **MAY** exchange symbolic tokens through approved channels.
- Modules **MAY** reference static configuration data.
- Deterministic symbolic scoring **MAY** be performed locally.

VNAGY

6. Interaction Boundaries

- All module interactions **SHALL** occur through predefined symbolic interfaces.
- No operational linkage between modules is permitted.
- Interaction channels **SHALL** remain non-reconstructable and non-algorithmic.

VNAGY

7. Enforcement Notes

- Violations invalidate module compliance.
- Non-compliant modules **SHALL** be excluded from VNAGY integration.

VNAGY

8. Non-Operational Clause

This policy defines no operational logic, thresholds, algorithms, or reconstructable behavior.

VNAGY

9. Licensing Reference

Subject to **VNAGY-PSDL-1.3** licensing constraints.
